 Language: Ukrainian
 Abstract: High share of industrial goods (over 60%) in the structure of export of goods and services confirms the determinative role of the industrial sector of economy in development of foreign trade in Ukraine. The aim of the article is to determine the level of export activity of the industry of regions of Ukraine and to develop the proposals for its further strengthening. By integrating the indices of industrial goods share in total export of goods and services, and the share of export in the volume of industrial products sold the indices of domestic industry export activity were calculated. The grouping of the regions of Ukraine by the integral indices revealed: 1) the average level of industry export activity is typical for the most regions (13 in 2015 against 8 in 2013); 2) high level was achieved in industrial eastern and border western regions; 3) low level is in southern and central regions. The analysis of the dynamics of industrial goods export indices was carried out. Positive and negative trends of the industry export activity in Ukraine during 2011-2015 were determined. A set of measures on diversification of industrial goods export structure, balance of industrial goods export structure in terms of trading partners of Ukraine, and gradual reorientation of investment flows to the development of hightech manufacturing was proposed.
Keywords: export of goods, volume of industrial products sold, export structure, integral index.
